1. Project Overview

This Flutter app provides a laboratory activities home screen with four activity buttons. It uses an XMB-inspired menu, animated wallpaper, selection feedback, navigation sounds, and custom pages. The goal is a simple, organized interface that makes each activity easy to identify and open quickly.

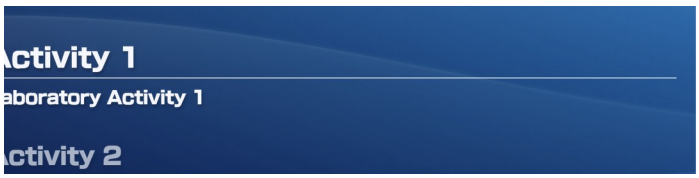

2. Design Decisions

I used a horizontal menu so the four activities stay visible. A separate wallpaper layer keeps motion behind the menu. Blue tones, white text, consistent spacing, and bold labels keep the interface readable.

- The laboratory theme supports the activity purpose.
- Horizontal placement makes the choices easy to scan.
- Blue, white, and bold text improve contrast.
- Arrows, Enter, taps, and swipes support selection.

3. Screenshots

Homepage: the screenshot shows the activity list, selected item, divider, and blue background. Other content uses the construction worker GIF above the placeholder message.

4. Challenges Faced

The main challenges were extending the divider, separating wallpaper animation from menu rebuilds, and accelerating held arrows. Widget separation, bounded positioning, and timed input repeat solved these problems.

5. Reflection

Reflection answers:

1. The hardest part was matching XMB movement while keeping the activity list aligned.
2. I learned that spacing, focus feedback, typography, and responsive layout improve UI clarity.
3. I would replace the placeholder content with complete Info, Media, and Settings features.
